Keene State College Safety Center - Manchester presents: Utility Specific OSHA Outreach Training

LEE MARCHESSAULT, CUSA
 OSHA Authorized Construction Outreach Instructor
 Utilities plus Construction Outreach Program (U+COP)

NCSH 472 Utilities plus Construction Outreach Program (U+COP)

This program focuses specifically on the requirements of the OSHA Outreach Training Program for Construction with customization relevant to utility employees and their contractors. The 2 day course covers essential core and elective requirements of the 10-hour Department of Labor OSHA Construction Outreach Training Program and delivers additional utility safety training hazards (General Industry and Construction) including the following subjects:

- Training and qualification requirements
- De-energizing lines and equipment
- Enclosed spaces requirements
- Utility specific PPE
- Materials handling including orientation to slings and rigging
- Aerial Lift requirements
- Working on live lines and equipment
- Grounding for employee protection
- Pole setting and tower work
- Substation safety
- Underground work safety
- Special conditions and precautions
- Discussion of updated utility regulations and NESC Standards

Who should attend: Utility safety and field personnel including line workers, substation high voltage electricians, underground workers, and communications/electrical utility contractors. Upon completion, the attendee receives a certificate of completion and the 10 hour Department of Labor Card with endorsement that utility specific information was covered (U+COP).

NCSH 473 Utility Training Techniques Course

Prerequisites: Prerequisites for attendance at this one day NCSH 473 Utility + Construction Outreach Program include: completion of NCSH 472, current OSHA 500 Construction Outreach Trainer authorization*, 5 years documented safety experience, as follows; utility or utility safety-related experience, high voltage experience, high voltage electrician, or line worker.

This one day course, coupled with attending the NCSH 472 Utilities Plus Construction Outreach Program (U+COP) provides 500 Level Construction Outreach Trainers* with key principals and teaching techniques to deliver a customized utility specific 10 hour Construction Outreach training program. This training focuses on teaching techniques, technical applications and adult learning methodologies specifically related to the utilities and utility contractor trades businesses. This course is ideal for utility operations that have need for internal trainers or employees who require update to utility training received in the past.

The focus will be on "how to" teach utility applications to adult learners. Concepts of effective training include: hands-on training and demonstrations, power point presentations, effective drills such as assessing hazards and role playing. Brief performance critiques are also incorporated into this course for Utility trainers.
